Explanatory Notes for Study 1 Materials
Prepared by: How Hwee Ong
Last updated: 19 June 2022

This folder contains the following files for Study 1:

1. /Study Materials/**Study 1 Qualtrics.pdf**
   Printout of Qualtrics Survey

2. /Study Materials/**Study 1 Preregistration.pdf**
   Printout of Preregistration

3. /Data Files/ **Study 1 – Raw Data – Deidentified.csv**
   Raw data, deidentified

4. /Data Files/ **Study 1 – Age.csv**
   This contains the age of participants. Normally, I would not separate participants' age from the main data file. However, this study was conducted in a lecture session and there were several unique age values (e.g., 51) that would allow for identification of participant.

5. /Data Analysis/ **Study 1 – Analysis RMarkdown.rmd**
   Primary Analysis Script in RMarkdown format

6. /Data Analysis/ **Study 1 – Analysis Output.html**
   Output of the Rmarkdown analysis in html format

Study 1 – Raw Data – Deidentified.csv

- This is the raw data for Study 1 downloaded from Qualtrics.
- Potentially identifiying information (e.g., IP addresses, age) has been removed
- At the end of the study, we had an open-ended question where participants could optionally provide comments about the study. This variable was also removed in case identifiable personal information is present.
- See the PDF of the Qualtrics survey for the exact questions. Options are always coded in ascending order. For example, if a question had 3 options, the smallest value in the CSV is always the first option; the largest value is always the last option.

Variable Name	What it is?
StartDate	Usual Qualtrics data
EndDate	
Status	
Progress	
Duration (in seconds)	
Finished	
RecordedDate	
DistributionChannel	
UserLanguage	

Consent	Whether participants agree to provide consent (1 = Yes)
Ticket	Ticket number for their lottery ticket
Likelihood_1_4	First estimate of reward likelihood (0 to 100)
Game_Choice	Choice of game version (1 = No pain, 2 = Pain) *Note that this variable was subsequently recoded in the analysis script to (0 = No pain, 1 = Pain).
Likelihood_2_4	Second estimate of reward likelihood (0 to 100)
Game_Practice	Self-reported score on the practice round of the finger agility task
Practice_timer_First Click	Time spent on the finger agility task practice round page
Practice_timer_Last Click	
Practice_timer_Page Submit	
Practice_timer_Click Count	
Game_Actual	Self-reported score on the actual round of the finger agility task
Actual_timer_First Click	Time spent on the finger agility task actual round page
Actual_timer_Last Click	
Actual_timer_Page Submit	
Actual_timer_Click Count	
Likelihood_3_4	Third estimate of reward likelihood (0 to 100)
Recall	Recollection of the choice of game version (1 = No pain, 2 = Pain)
Platform	Platform used to perform the study (1 = trackpad, 2 = mouse, 3 = touchscreen, 4 = others)
Platform_4_TEXT	Open-ended response for platform use
Pain	Reported level of pain on the finger agility task (1 to 8; higher = more pain)
Gender	1 = Male, 2 = Female, 3 = Others, 4 = Prefer not to say
Gender_3_Text	Open-ended response for gender
Age	1 = Provided a response, 2 = prefer not to say (The actual age provided are in a separate file (Study 1 – Age.csv)
SC0	Irrelevant scoring variable.

Study 1 – Age.csv

- This is the file with participants age. This file is sorted in ascending order to prevent matching with main datafile (which could lead to identification of participants).
